EDUCATION

1337 Coding School (UM6P)

Computer Science & Software Engineering Curriculum

Morocco

2024 – Present

LEADERSHIP

Founder – DevOps Student Club

2026 – Present

1337 Coding School (UM6P)

Morocco

- Founded and lead a student community focused on DevOps, cloud infrastructure, automation, and systems engineering
- Organized technical discussions and collaborative initiatives around modern infrastructure technologies
- Connected students with industry professionals and engineers for knowledge-sharing opportunities

CERTIFICATIONS

Oracle Cloud Infrastructure Foundations Associate

2025

Oracle

PROJECTS

SysRun | Terraform, OCI, Docker, CI/CD, Linux

Apr. 2026 – Present

- Built cloud infrastructure automation workflows using Terraform, OCI, Docker, and CI/CD pipelines to provision and deploy services consistently
- Configured Linux servers, reverse proxies, TLS-secured endpoints, and infrastructure-as-code deployments following DevOps best practices
- Integrated cloud, automation, and containerization technologies to streamline deployment, configuration management, and service operations

Inception | Docker, Docker Compose, Nginx, MariaDB, WordPress, Redis

May. 2026 – Aug. 2026

- Designed and deployed a production-inspired multi-container infrastructure using Docker and Docker Compose
- Configured and integrated Nginx, MariaDB, WordPress, and Redis services within isolated containers
- Implemented container networking, persistent storage, service isolation, and secure inter-service communication

Webserv | C++, Networking, HTTP

May. 2026 – Aug. 2026

- Engineered an HTTP server in C++ from scratch following core web server architecture principles
- Implemented socket-based networking, HTTP request/response handling, CGI, and concurrent clients
- Developed configuration parsing, connection management, and low-level resource handling mechanisms

ft.transcendence | Java, Spring Boot, gRPC, Microservices, Backend

Aug. 2026 – Present

- Developing the backend **Org-Service**, responsible for organization and membership management within the project's microservice architecture
- Building backend services using **Java and Spring Boot**, including REST APIs, service-layer logic, and backend business functionality
- Implementing **gRPC** communication between microservices and integrating the Org-Service with other backend services

TECHNICAL SKILLS

Programming Languages: C, C++, Java, Bash, Python

Backend: Spring Boot, gRPC, REST APIs, Microservices

Systems & Operating Systems: Linux, Networking, Process Management, Signals, File Descriptors, Multithreading, Synchronization Primitives, Linux Server Administration, Virtualization

DevOps & Cloud: Docker, Docker Compose, Terraform, GitHub Actions, CI/CD, Oracle Cloud Infrastructure (OCI), Infrastructure as Code (IaC), Nginx, TLS/SSL, Reverse Proxy Configuration, MariaDB

Developer Tools: Git, Make, GDB, Valgrind, Vim

LANGUAGES

Arabic (Native), English (Professional), French (Basic).
